

## Under Vehicle System

### Greater security with SecuScan®

The innovative technological solution of the SecuScan® under vehicle system provides simple and fast possibility to find dangerous tools, guns, explosive devices and contrabands mounted on the under vehicle carriage. The system significantly increases the traffic flow without slowing down control points.

## Features

- System creates highest resolution images (in color)
- Automatic Foreign Object Detection
- Zoom-In-Technology for inspection of finest details
- Fixed and mobile versions
- Suitable for all vehicle types
- View of full undercarriage (incl. door sills / running boards)
- Network capability, e.g. for data exchange of networked systems
- Easy integration via interfaces for customer specific solutions

## Range of application

- airports, military camps, embassies nuclear power plants, prisons,
- border crossing
- car parks
- protection of special events
- mobile law enforcement checkpoints

## System description

The SecuScan® consists of the following elements: scanner, control workstation and traffic light. Both systems can be install with rubber pads and aluminium ramps. The fixed version which is shallow mounted is made of stainless steel.

The scanner captures the image of the moving vehicle for the test and it is suitable all vehicle types to scan.
